

# What the media won't tell you about phone towers and your children.

- Small cell antennas (4G, soon to be 5G) can be installed anywhere without council permission or approval.
- Only adjoining properties need to be notified of the installation.
- There is no legal minimum distance an antenna should be installed from homes, schools, hospitals etc.
- EME Reports are calculated by software and not actually measured.
- Our Protection Standard is based on guidelines established in 1998 and are 1000 times higher than many other countries.

Australia needs a mandatory minimum distance between telco antennas and our children.

Let's make it happen.
